

## Tech Stack

- **Frontend:** Plain HTML/CSS/JS
- **Backend:** FastAPI
- **Database:** SQLite

## Data Model

This represents a single link saved by a user.

| Field Name | Data Type    |
|------------|--------------|
| id         | int          |
| url        | String       |
| title      | String       |
| tags       | String Array |
| status     | String       |
| created_at | Date         |

## API Endpoints

- POST /api/links
  - **Example Request:**

```
{
  "int": "1",
  "url": "https://example.com",
  "title": "Fetched Title",
  "tags": ["documentation", "learning"],
  "status": "read_later",
  "created_at": "2026-05-27T16:00:00Z"
}
```

- GET /api/links
  - **Parameters (if filter by tags):** ?status=read\_later&tag=learning
  - **Example Response:**

```
[
  {
    "id": "1",
    "url": "https://example.com",
    "title": "Example Domain",
    "tags": ["documentation", "learning"],
```

```
"status": "read_later",  
"created_at": "2026-05-27T23:00:00Z"  
}
```

- PATCH /api/links/:id

- **Example Request:**

```
{  
  "status": "read",  
  "title": "Updated Custom Title"  
}
```

- DELETE /api/links/:id
